

Examples showing partial and full coverage of an embryo in plane and volume

a. Shows maximum intensity projections of an embryo which is partially covered (left and middle) and fully covered (right) in X-Y plane. The Y-galvo offset can be changed to bring a partially-covered embryo into full coverage, as shown on the right. **b.** Maximum-intensity projection of a volume resliced in Z, showing partial (left) and full (right) coverage of an embryo in the Z-direction. If the embryo is only partially-covered in Z, move the diSPIM module until the embryo is fully covered.
